# The HubX logo

HubX is the MSP Hub platform. Its logo is a geometric “Hub” wordmark in charcoal followed by an orange X mark. Use these pages to pick the right version, give the logo room, and place it correctly in the portal, documents, slides, and email.

01 · COLOR VERSIONS

# Pick the version that matches the background

Four versions share the same artwork. Full color is the default. Use the others only when the background calls for them. File names refer to the `svg/` and `png/` folders in this kit.

### Full color · primary

Charcoal “Hub”, orange X. Use on white and light backgrounds up to the portal’s light gray canvas.

`hubx-logo-full-color.svg`

### Reversed · dark backgrounds

White “Hub”, orange X. The preferred choice on charcoal, black, and the portal’s dark mode, because the orange still carries the brand.

`hubx-logo-reversed.svg`

### All white · knockout

Use on Brand Orange, on photographs, on other colored fields, and anywhere the orange X would lose contrast.

`hubx-logo-white.svg`

### One color · charcoal

For single-color printing, engraving, embossing, faxed forms, and partner pages that allow only grayscale marks.

`hubx-logo-charcoal.svg`

02 · X MARK

# The X on its own

The X mark stands in for the full logo where the lockup would be too small to read: favicons, app icons, social avatars, and tight UI. It has no ™. Use the full logo first whenever it fits at 24 px tall or larger.

### Orange

`hubx-mark-orange.svg`

### White

`hubx-mark-white.svg`

### App icon

`hubx-app-icon.svg`

The app icon puts the orange X on a charcoal tile with a 22% corner radius. The X spans 60% of the tile width. A charcoal X mark (`hubx-mark-charcoal.svg`) is in the file set for one-color use.

03 · BRAND COLORS

# Two colors and white

These are the exact values in the logo files and match the HubX Design Language. Screen values (HEX, RGB) are exact. The CMYK values are a starting conversion, so ask your printer for a press proof and record the matched values or Pantone reference here when you have them.

### Brand Orange

| | |
|---|---|
| HEX | #F97316 |
| RGB | 249 115 22 |
| CMYK | 0 54 91 2 |
| Use | The X; accents |

### Charcoal

| | |
|---|---|
| HEX | #424242 |
| RGB | 66 66 66 |
| CMYK | 0 0 0 74 |
| Use | “Hub” and ™ |

### White

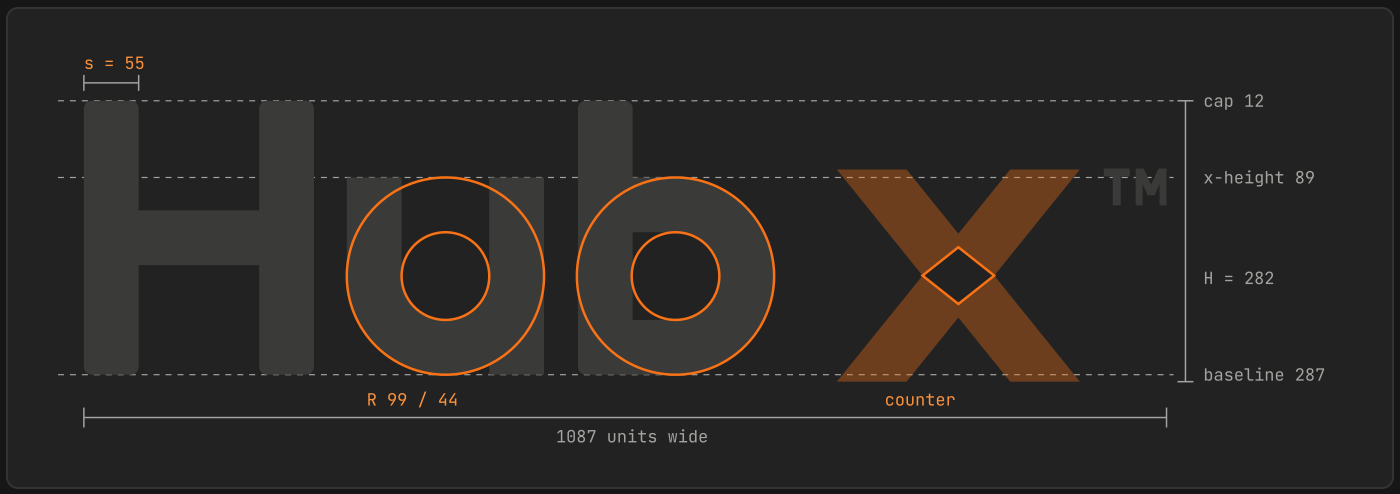

| | |
|---|---|
| HEX | #FFFFFF |
| RGB | 255 255 255 |
| CMYK | 0 0 0 0 |
| Use | Reversed and knockout |

Brand Orange measures 2.8:1 against white, which is fine for a logo but too low for body text. Do not set small orange text on white. In the portal, links and labels stay charcoal.

04 · CONSTRUCTION

# Built from one stroke weight

Every part of the wordmark uses the same 55-unit stroke. The bowls of “u” and “b” are concentric arcs with a 99-unit outer radius and a 44-unit inner radius. The X sits a few units above the x-height and below the baseline so it looks the same size as the letters. Never redraw the logo, retype it in a font, or rebuild it from these numbers. Always place the supplied files.

## 3.85 : 1

Width to height. A logo 1 in tall is 3.85 in wide.

## 1087 × 282

Artboard of every lockup SVG, in units.

## Diamond counter

The X is two chevrons that touch at their side points and leave an open diamond in the center.

05 · CLEAR SPACE AND SIZE

# Give it half its height on every side

Keep text, edges, and other graphics outside a margin equal to half the logo's height (½H). A logo 32 px tall needs 16 px of space. A logo 1 in tall on a page needs 0.5 in. The orange zone below shows that area.

## 24 px

Smallest full logo on screen (about 92 px wide). The portal header uses 28–32 px.

## 0.25 in · 6.5 mm

Smallest full logo in print. Below this the ™ fills in.

## 16 px

Smallest X mark. Below the full-logo minimum, switch to the mark.

HubX™ 56 px

HubX™ 32 px

06 · BACKGROUNDS

# Match the version to the ground

Place the logo on a flat, quiet area. On a photograph, choose a dark, even part of the image or add a dark overlay, then use the all-white version.

**USE**

White: full color.

**USE**

Light gray (#EEEEEE portal canvas): full color.

**USE**

Dark mode and black: reversed.

**USE**

Charcoal: reversed.

**USE**

Brand Orange: all white.

**USE**

Photo with a dark overlay: all white.

07 · MISUSE

# Don’t alter the artwork

Each of these makes the logo harder to recognize. If a layout seems to need one of them, change the layout instead.

**DON’T**

Stretch or squash it. Scale by width and height together.

**DON’T**

Recolor it, even with other portal colors. Use only the four versions.

**DON’T**

Rotate or tilt it.

**DON’T**

Add shadows, outlines, glows, gradients, or bevels.

**DON’T**

Use the full-color logo on orange or busy grounds. The X disappears. Use all white.

**DON’T**

Retype the logo in a font. Always place the artwork file.

08 · IN USE

# How it looks in place

Reference layouts for the places the logo appears most. Placement and sizes are guidance. Clear space and version choice are rules.

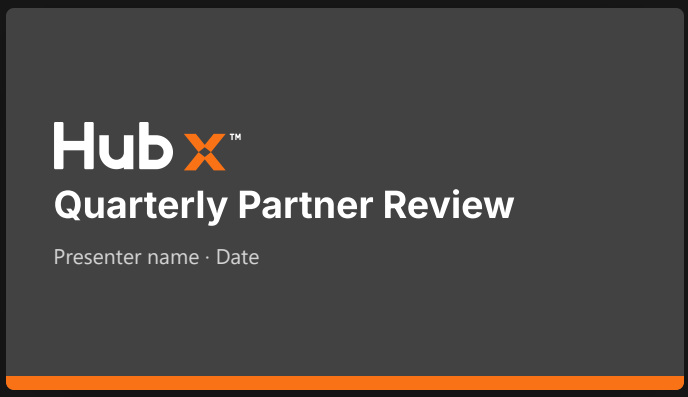

**Portal header, light.** Full color, 28 px tall on phones, 32 px from the small breakpoint up. Left aligned, links to Home.

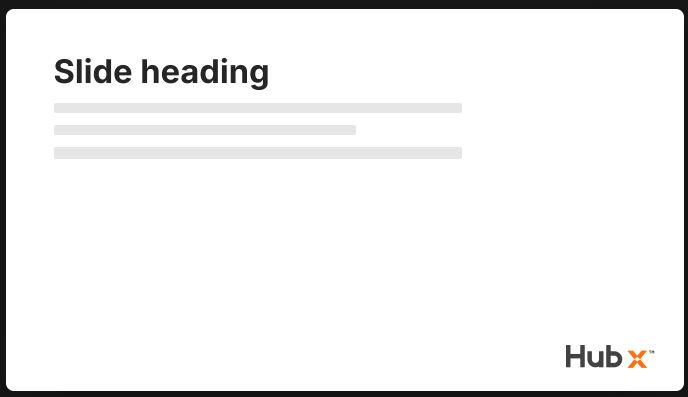

**Portal header, dark mode.** Reversed version at the same size and position.

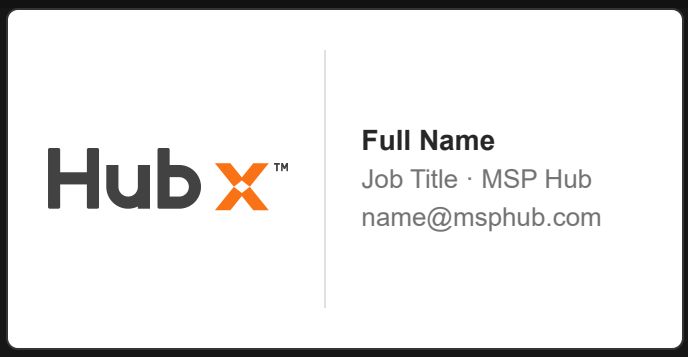

**Letterhead and documents.** Full color, top left, 0.45 in tall (about 1.75 in wide) on Letter or A4. Inside the page margin, never bled to the edge.

**Title slide.** Reversed on charcoal, about a third of the slide width.

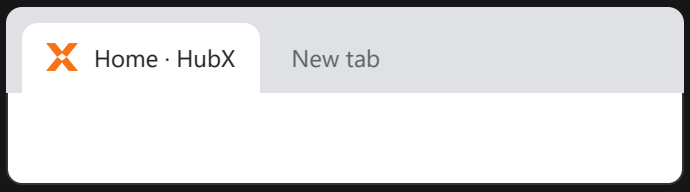

**Content slides.** Small full-color logo bottom right, same spot on every slide.

**Email signature.** Use the PNG (`png/hubx-logo-full-color@4000w.png`) shown at 120 px wide. Many mail clients block SVG.

**Orange fields.** All white only.

**Favicon and app icon.** X mark only. The lockup is unreadable at 16 px.

09 · FILES AND NAMING

# Which file to use

The master files are in this kit: vector files in `svg/`, transparent PNGs in `png/`. Use SVG wherever the tool accepts it, including web pages, Figma, Illustrator, and current Word and PowerPoint. Use the PNGs for email and older tools. They have transparent backgrounds and are 4000 px wide, so scale them down, never up.

| FILE | VERSION | USE ON |
|---|---|---|
| `hubx-logo-full-color.svg / .png` | Charcoal + orange | White and light backgrounds. The default. |
| `hubx-logo-reversed.svg / .png` | White + orange | Charcoal, black, dark mode. |
| `hubx-logo-white.svg / .png` | All white | Orange, photos, other colors. |
| `hubx-logo-charcoal.svg / .png` | All charcoal | One-color print and grayscale. |
| `hubx-mark-orange.svg / .png` | X mark | Favicons, avatars, small UI on light grounds. |
| `hubx-mark-white.svg / .png` | X mark | Small UI on dark or orange grounds. |
| `hubx-mark-charcoal.svg / .png` | X mark | One-color small uses. |
| `hubx-app-icon.svg / .png` | Orange X on charcoal tile | App stores, home screens, integrations listings. |

## Writing the name

**WRITE**

### HubX

One word, capital H and capital X. Plain text, no logo artwork inside sentences.

**AVOID**

~~Hubx~~ · ~~HUBX~~ · ~~Hub X~~ · ~~Hub-X~~

An all-caps heading style may set it as HUBX in display type. Body copy never does.

## Trademark

- Every full logo carries ™. Keep it. It is part of the artwork, so it scales with the logo.
- When the mark is registered, replace ™ with ® in the master files. Do not add ® to existing copies by hand.
- The X mark alone carries no symbol.
